

Gentlemen:

I urge your thoughtful consideration with respect to NPRM 04-37. We must protect our valuable HF spectrum from additional interference sources. BPL will surely be catastrophic in its effects on HF communications.

I strongly urge the FCC to especially consider FEMA's comments, and to await those of the NTIA, due shortly, and prohibit further proliferation of this technology.

It will be much easier to deal positively with BPL now, and limit or prohibit its deployment rather than after the fact when interference remediation will the norm, and government and other spectrum users are unable to fulfil mission critical communications needs.

Thank you for your time.
